SUMMARY

Backend Software Engineer with 4+ years building high-throughput distributed systems and AI-integrated pipelines in Java, Python, and Go. Proven track record cutting latency by 50–70% and scaling to 50K+ events/sec across AWS and GCP.

SKILLS

Languages & Frameworks: Java, Python, Go, C++, SQL, Spring Boot, FastAPI, gRPC, GraphQL

Architecture & Databases: Distributed Systems, Event-Driven Architecture, PostgreSQL, MongoDB, Cassandra, Redis, pgvector

AI & LLM: RAG Pipelines, Vector Search, LangChain, OpenAI API, Semantic Search, LLM Observability, Pinecone

Cloud, DevOps & Messaging: AWS, GCP, Kubernetes, Docker, Terraform, GitHub Actions, Kafka, Apache Flink, Redis Streams

Observability: Datadog, Prometheus, Grafana, OpenTelemetry, SLIs/SLOs

WORK EXPERIENCE

Software Developer, Brightmind Enrichment

Sep 2025 - Present

- Designed **Java Spring Boot** microservices for real-time volunteer matching, cutting latency from 320ms to 150ms.
- Built **Kafka** event-driven pipeline syncing shelter capacity to 3 microservices, cutting stale reads by 40% at peak load.
- Integrated **RAG** pipeline via **OpenAI API** and **pgvector** for aid-matching, improving recommendation relevance by 35%.
- Deployed **Docker** microservices on **AWS EKS** with **Kubernetes** autoscaling, sustaining 99.9% uptime through traffic surges.

Software Developer, New York University

Feb 2024 - May 2025

- Architected a **GCP** genomic backend in **Java Spring Boot**, serving ML inference results to 10+ research teams via Docker.
- Developed a Python semantic search service over **MongoDB** metadata, improving embedding-based retrieval by 30%.
- Designed a **Kafka**-ingested Flink pipeline on AWS processing 50K+ bio-events/sec with error rates under 0.1%.
- Optimized **PostgreSQL** genomic queries with indexing and query tuning, cutting p99 latency from 450ms to 150ms.
- Built **gRPC** APIs exposing genomic data to 5+ downstream microservices, cutting integration latency by 25%.

Software Developer, Amdocs

Dec 2021 - Jun 2023

- Refactored **Java Spring Boot** billing engine with **Datadog** profiling, dropping p99 response time from 420ms to 140ms.
- Engineered a **Kafka** billing mediation layer with DLQ retry and ordering guarantees, achieving 99.97% delivery reliability.
- Modeled telecom billing state in **Cassandra** with partition key tuning, handling 500K+ daily transactions at sub-20ms latency.
- Deployed billing services on **Kubernetes** with rolling updates and health probes, raising release success rate to 99.4% from 94%.
- Built a **Redis**-backed metrics cache across distributed microservices, cutting downstream latency by 35ms and DB overhead.
- Migrated telecom backend to **AWS RDS** with SQL query optimization, cutting execution time by 40% and error rate by 20%.

PROJECTS

CreatorIQ - AI Content Performance Analyzer & Growth Pattern Intelligence Engine: [Github](#)

- Designed **RAG pipeline** with **FastAPI**, **LangChain**, and **pgvector** to generate personalized creator growth playbooks.
- Built **Python** pipeline to embed post engagement data into pgvector via sentence-transformers for similarity search.
- Traced LLM inference with **OpenTelemetry** and **Prometheus**, tracking p50/p95/p99 latency per insight in **Grafana**.
- Automated **CI/CD** via **GitHub Actions** running backend lint, React build, and Docker Compose checks on every push.

PriceStream - Real-Time E-Commerce Price Movement Tracker & Buy-Signal Engine: [Github](#)

- Built a **Go** service ingesting price events into **Redis Streams**, powering sub-5ms buy-signal detection.
- Ran a **PySpark** job over 42K price records to compute 30-day moving averages stored in **DynamoDB**.
- Designed a **GraphQL** API with WebSocket subscriptions delivering live price drops and buy signals to React.
- Provisioned ECS, Redis, and IAM on AWS via **Terraform** for end-to-end pipeline deployment.

EDUCATION

New York University | New York, NY | May 2025

MS in Computer Science; GPA: 3.6/4.0

Cummins College of Engineering | Pune, India | Jul 2021

BTech in Electronics and Telecommunication; GPA: 8.4/10
